

LUBRICANT SEALER

Lubrifiant Chasseur De Phoques

DESCRIPTION:

State County and Municipal highway departments have been plagued for years by rust and seizure problems with the chains, augers, and interior box corrosion of tail gate and v-bottom salt spreaders that dispense ice control chemicals such as sodium chloride (salt), calcium chloride and magnesium chloride.

Lubricant/Sealer has been developed to lubricate and seal. Lubricant/Sealer can also be used to lubricate and seal other types of heavy equipment that comes in contact with salt or other corrosive materials.

DIRECTIONS:

Lubricant/Sealer should be sprayed directly on all chains, augers, tailgates, spreaders, truck beds, etc. that dispense ice control chemicals. This product should be used periodically, during the ice melt season to prevent rust and corrosion. At the end of the season, when the equipment is ready to be put away, it is highly recommended that Lubricant/Sealer is applied to all equipment and surfaces that have been in contact with any of these corrosive materials.

PRECAUTION: AL USARIO: Si usted no lee Ingles, no use este producto, hasta que la etiqueta le haya sido explicada ampliamente.

TO THE USER: If you cannot read English, do not use this product until this label has been fully explained to you.
